

CIRCUIT TESTER CT8007

The CT8007 is a computer safe, all solid state electronics circuit tester. Unlike regular test lights, this high-impedance circuit tester is safe to use around automotive computers, electronics, ecm's, sensors and air bags. Rugged, built to last and simple to use, is self powered (no batteries needed) and it requires no wire or clip connector to ground. The CT8007's LCD display shows polarity, allowing users to check for power and ground in less time that it takes to set-up a regular test light. Specially designed for use in automobiles, trucks, tractors, trailers, RV's, motorcycles, boats and any DC powered circuit from 3 to 28 volts.

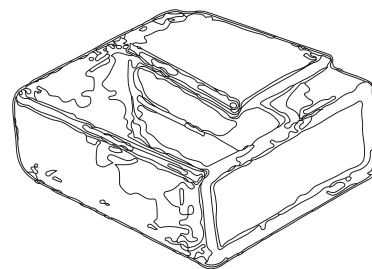

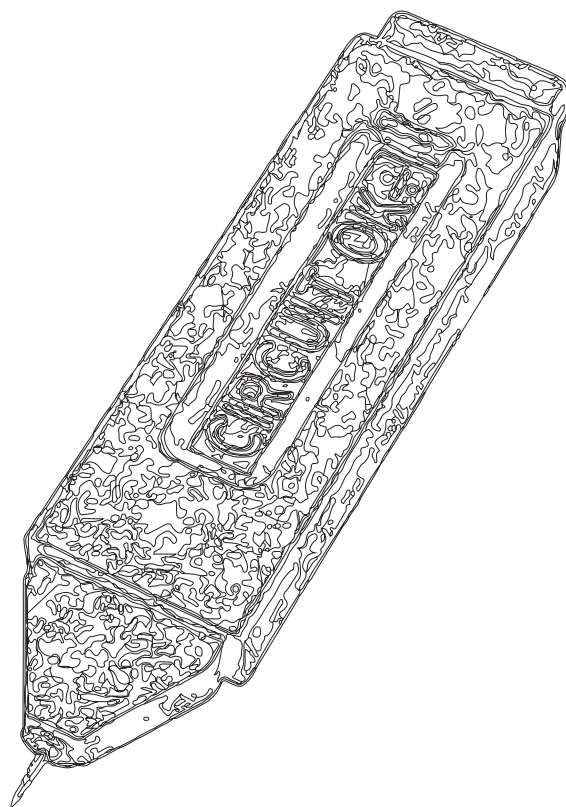

Features

- ✓ No Ground or clip required
- ✓ Indicates Circuit Polarity
- ✓ ECU Safe

Liquid Crystal Display indicates "CIRCUIT OK +" on contacting positive voltages, and "CIRCUIT OK -" on contacting negative voltages

Negligible current draw (1 micro-ampere) is 30,000 times less than regular lamp type testers. This gives complete safety when working around sensitive electronic control modules and sensors

Operating range between 6 and 28 Volt DC in battery powered systems. Uses no batteries. Maintenance free

Kit Includes

- ✓ Circuit Tester CT8007
- ✓ Cap with pocket clip
- ✓ Operation Instructions
